Catalogue for Modifying Water Pipes in Fuel Tanks

Masader Al-Jazeera Trading Co.

شركة مصادر الجزيرة للتجارة **Masader AL-Jazeera Trading Co**

Masader Al-Jazeera Trading Company is a market-leading provider of trailers and fuel tanks (steel and aluminum), maintenance and repair services, as well as a comprehensive range of spare parts. Our unwavering commitment to quality, professional standards and dedicated customer service sets us apart as one of the leading names in the supply and maintenance of tanks and trailers of all kinds in the Kingdom of Saudi Arabia. Our workshop is conveniently located on Al Kharj Road in Riyadh.

With a capital of 50,000,000 SAR, supported by a dedicated workforce of multinational professionals and technicians of high caliber, and with the availability of equipment and devices that enhance the quality of services provided, Masader Al-Jazeera Trading Co. is committed to maintaining and enhancing its reputation in the years to come. We believe that our success to date will pave the way for further achievements in the future at various levels. We maintain the highest levels of quality and accreditation from Saudi organizations and companies in accordance with Saudi Aramco's requirements (SASO), the Saudi Standards and Metrology Organization.

Due to the requirements to modify the drainage pipes from the surface of the tank so that the drainage process is through external pipes instead of internal pipes and to maintain the quality of the product, we offer you our services for the required maintenance and replacement process with the highest quality and safety standards to maintain the quality of the product and the efficiency of the water drainage process, which preserves the body of the tank.

The route of the new external pipes is determined according to the type and shape of the tank to ensure the integrity of the tank body and the desired aesthetic appearance.

The pipes are welded or connected to the drainage tank in accordance with the design and shape of the tank and customer requirements. All work will be carried out to the highest quality and safety standards.

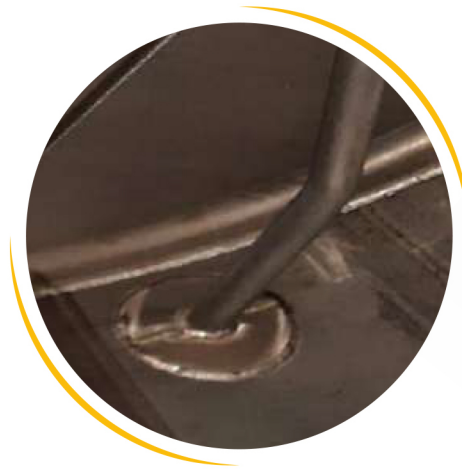

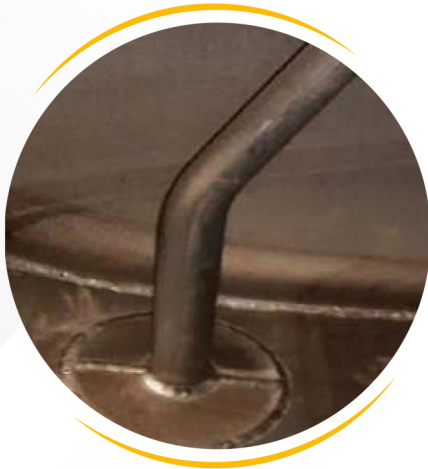

Once the new drainage pipeline has been installed, the drainage process is tested and the results are confirmed by the quality team.

A quality certificate is issued for the drainage line.

Delivery of the tank to the customer accompanied by the quality assurance of the drainage line in accordance with quality standards and customer requirements.

» Sealing the Water Pipes Inside the Tank

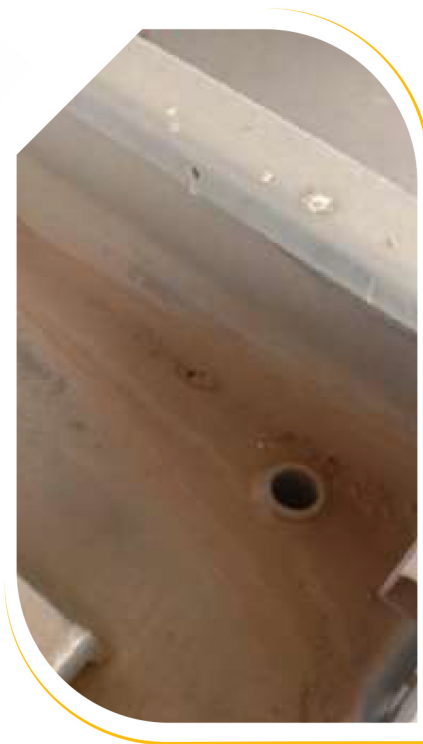

Establishing a maintenance and replacement plan, as well as identifying the internal pipes and the most effective method for removing or maintaining them without causing any damage to the internal tank body.

Determining the size and dimensions of the top opening in the tank and identifying the optimal sealing method.

Determining the size and dimensions of the top opening in the tank and identifying the optimal sealing method.

Sealing the bottom openings of the tank by using materials similar to the material of the tank's surface. This will be carried out by professional welders who hold international certifications.

Diverting the water drainage point from the top of the tank through the ladder.
